

ATLAS Global Infrastructure UCITS ICAV - Series A EUR Unhedged

Fund Objective

The ATLAS Infrastructure Global Strategy aims to provide investors with exposure to a selection of high quality infrastructure equities. The portfolio will be invested in OECD countries only and is a high conviction strategy focussed on investing in infrastructure securities which provide the optimal balance of return and risk. The fund aims to monitor and manage carbon and climate change risk exposures within set tolerances.

Monthly Update

The portfolio returned 2.85% (net of fees) in August versus the benchmark return of 0.97%. The total contribution to local returns from our equity holdings was 2.86%. The main contributors in the period were our holdings in Atlas Arteria, Edison International and SES. Pinnacle West, Aeroports de Paris and ALLETE were the main detractors.

Portfolio Positioning and Macro Outlook

The Investment Committee resolved to reduce the position in Severn Trent and increase the strategy's weighting to Aena. The driver for the trade was the lower forward returns available from Severn Trent after recent strong share price appreciation. The portfolio remains well positioned with regards to stagflation and fast transition, GDP beta and recession risk remain close to neutral compared to the universe whereas CPI beta and long bond beta are better than the universe.

Stock Highlight

Edison International is a Californian Electric utility and is one of the larger positions in the fund. Edison is fully regulated by both the Californian State Utility Commission (for state distribution and transmission) and the Federal Energy Regulatory Commission (for interstate transmission assets). Edison recently received a positive final decision from the California Public Utilities Commission in relation to its 2021 General Rate Case. This included an improvement in the company's allowance for wildfire mitigation spending over the next three years, which was a focal point of the decision given California's wildfires over the past 5 years. Edison also continues to play a central enabling role in the energy transition through its support of wind and solar generation and will result in increased investment opportunities for Edison as transport and domestic heating are electrified over time.
